How a Mother Rescued her Little Child from a Locomotive.
An Engineer in charge of the milk train, was approaching Ansonia this Tuesday morning, he discovered a little child playing between the rails, immediately in advance of the locomotive, in blissful ignorance of approaching danger. He stopped the train, and reversed his engine, but the distance was too short and it seemed as if the little innocent must inevitably be crushed to atoms. The child's mother, however, most instinctively leaping forward, threw her arms around the child, and as the ponderous machine was within little more than a car's length of the innocent, she rushed out of her house, and snatched the child from the jaws of death. - Waterbury American.

The Fish Officer Bled.
